The MAILING DATE of this communication appears on the cover sheet with the correspondence address							
THE REPLY FILED 01 August 2003 FAILS TO PLACE T Therefore, further action by the applicant is required to ave final rejection under 37 CFR 1.113 may only be either: (1) condition for allowance; (2) a timely filed Notice of Appea Examination (RCE) in compliance with 37 CFR 1.114.	roid abandonment of this applica a timely filed amendment which (with appeal fee); or (3) a timely	ation. A proper reply n places the applica	y to a tion in				
PERIOD FOR REPLY [check either a) or b)]							
a) The period for reply expires 3 months from the mailing date b) The period for reply expires on: (1) the mailing date of this A no event, however, will the statutory period for reply expire I ONLY CHECK THIS BOX WHEN THE FIRST REPLY WAS 706.07(f). Extensions of time may be obtained under 37 CFR 1.136(a). The fee have been filed is the date for purposes of determining the period of fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of (2) as set forth in (b) above, if checked. Any reply received by the Offic timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.17(a) is calculated from: (1) the expiration date of (2) as set forth in (b) above, if checked. Any reply received by the Offic timely filed, may reduce any earned patent term adjustment.	Advisory Action, or (2) the date set forth ater than SIX MONTHS from the mailing FILED WITHIN TWO MONTHS OF THE date on which the petition under 37 CFI f extension and the corresponding amount shortened statutory period for reply the later than three months after the mail	g date of the final rejecting FINAL REJECTION. R 1.136(a) and the apprount of the fee. The appropriationally set in the final	on. See MPEP opriate extension opriate extension Office action; or				
1. A Notice of Appeal was filed on Appellant's Brief must be filed within the period set forth in 37 CFR 1.192(a), or any extension thereof (37 CFR 1.191(d)), to avoid dismissal of the appeal.							
2. The proposed amendment(s) will not be entered because:							
(a) ⊠ they raise new issues that would require further consideration and/or search (see NOTE below);							
(b) they raise the issue of new matter (see Note below);							
(c) ☐ they are not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for appeal; and/or							
(d) they present additional claims without cancell NOTE:	ng a corresponding number of fi	nally rejected claim	s.				
3. Applicant's reply has overcome the following reject	ion(s):						
4. Newly proposed or amended claim(s) would canceling the non-allowable claim(s).	be allowable if submitted in a se	eparate, timely filed	amendment				
5. The a) affidavit, b) exhibit, or c) request for reconsideration has been considered but does NOT place the application in condition for allowance because:							
6. The affidavit or exhibit will NOT be considered because it is not directed SOLELY to issues which were newly raised by the Examiner in the final rejection.							
7.☑ For purposes of Appeal, the proposed amendment(s) a)☑ will not be entered or b)☐ will be entered and an explanation of how the new or amended claims would be rejected is provided below or appended.							
The status of the claim(s) is (or will be) as follows:							
Claim(s) allowed: <u>none</u> .							
Claim(s) objected to: <u>none</u> .							
Claim(s) rejected: <u>7-29</u> .							
Claim(s) withdrawn from consideration: <u>none</u> .							
☐ The proposed drawing correction filed on is a)☐ approved or b)☐ disapproved by the Examiner.

SUPPLEMENTAL ADVISORY ACTION

Applicant's arguments filed June 30, 2003 and supplemental arguments and declaration filed August 1, 2003 have been fully considered but have not been found to be persuasive.

1. Applicant argues, on page 8 of Paper No. 19, that the rejection is improper because the claimed invention defines adhesive retention for the claimed film as being defined by a process comprising applying 1,3 – dioxolane to a width of 2 mm on one side of a sample film at a first edge rolling the sample film into a tubular film, bonding the first edge onto the opposite edge to form a tubular label, and heat shrinking the label onto metal cylinder at a temperature of 200 degrees Celsius for 2 seconds. However, the claims prior to amendment were not directed to a process comprising applying 1,3 – dioxolane to a width of 2 mm on one side of a sample film at a first edge rolling the sample film into a tubular film, bonding the first edge onto the opposite edge to form a tubular label, and heat shrinking the label onto metal cylinder at a temperature of 200 degrees Celsius for 2 seconds, nor were the claims directed to a film having an adhesive retention.. The amendment therefore raises new issues, which to be completely addressed would require further search and consideration, and the amendment therefore has not been entered. Even if the amendment was entered, the amended claim would not overcome the rejection because the adhesive retention appears to be directed to a desired result of the invention (no peeling after heat shrinking to a metal container) rather than a structural limitation or physical property which can be claimed.

Applicant argues, on page 8 of Paper No. 19, that the rejection is improper because the claimed invention defines preform defect finish percentage for the claimed film as being defined by a process comprising applying 1,3 – dioxolarie to a width of 2 mm on one side of a sample

Application/Control Number: 09/492,173

Art Unit: 1772

film at a first edge rolling the sample film into a tubular film, bonding the first edge onto the opposite edge to form a tubular label, and heat shrinking the label onto metal cylinder at a temperature of 200 degrees Celsius for 2 seconds. However, the claims prior to amendment were not directed to a process comprising applying 1,3 – dioxolane to a width of 2 mm on one side of a sample film at a first edge rolling the sample film into a tubular film, bonding the first edge onto the opposite edge to form a tubular label, and heat shrinking the label onto metal cylinder at a temperature of 200 degrees Celsius for 2 seconds. The amendment therefore raises new issues, which to be completely addressed would require further search and consideration, and the amendment therefore has not been entered. Even if the amendment was entered, the amended claim would not overcome the rejection because the preform defect finish percentage appears to be directed to a desired result of the invention (no creasing or jumping after heat shrinking to a metal container) rather than a structural limitation or physical property which can be claimed.

Applicant also argues, on page 9, that the shrinkage obtained in experiments for Fukuda is 49%, which is well outside the claimed range of 10 – 40%. However, Fukuda et al disclose a shrinkage of not more than 15 in water at 85 degrees Celsius (column 4, lines 44 – 51). Therefore, the shrinkage would be readily determined through routine optimization by one having ordinary skill in the art depending on the desired end use of the product. It therefore would be obvious for one of ordinary skill in the art to vary the shrinkage, since the shrinkage would be readily determined through routine optimization by one having ordinary skill in the art depending on the desired end result as shown by Fukuda, in the absence of unexpected results. *In re Boesch and Slaney, 205 USPQ 215 (CCPA 1980)*.

Application/Control Number: 09/492,173

Art Unit: 1772

In addition, the claimed invention has not been rejected as being unpatentable over Fukuda alone, but over Fukuda in view of Shibuya; it is Shibuya which teaches a heat shrinkable composition comprising a blend of a non – elastomeric polyester and an elastomeric polyester, as discussed on page 2 of the previous Action, and no data have been obtained for Shibuya.

Applicant also argues on page 9 that there would be no motivation to combine Fukuda with Shibuya because their teachings may be contrary to each other; Shibuya teaches enhancement of cold resistance, Applicant argues, whereas Fukuda teaches warm water resistance, sufficient shrinkage and solvent resistance. However, the properties of warm water resistance and cold resistance are not necessarily contrary; furthermore, as stated on page 2 of the previous Action, Shibuya et al teach a composition comprising 50 weight percent to 99.9 weight percent thermoplastic polyester resin and 0.1 weight percent to 50 weight percent polyester resin in a heat shrinkable polyester film for the purpose of making a heat shrinkable film having superior gas barrier property. The desirability of providing for a blend of a non – elastomeric polyester and an elastomeric polyester in Fukuda, which is a heat – shrinkable film, would therefore be obvious to one of ordinary skill in the art.

One of ordinary skill in the art would therefore have recognized the advantages of providing for a composition comprising 50 weight percent to 99.9 weight percent thermoplastic polyester resin and 0.1 weight percent to 50 weight percent polyester resin in Fukuda et al.

2. The declaration under 37 C.F.R. 1.132 filed August 1, 2003 is insufficient to overcome the 35 U.S.C. 103(a) rejection of Claims 7 – 10, 13, 15, 18, 20, 23, 25 and 28 as being unpatentable over Fukuda et al (U.S. Patent No. 4,985,538) in view of Shibuya et al (U.S. Patent

Art Unit: 1772

No. 5,270,390), 35 U.S.C. 103(a) rejection of Claims 11 – 12, 16 – 17, 21 – 22 and 26 – 27 as being unpatentable over Fukuda et al (U.S. Patent No. 4,985,538) in view of Shibuya et al (U.S. Patent No. 5,270,390) and further in view of Amberg et al (U.S. Patent No. 3,760,968) and 35 U.S.C. 103(a) rejection of Claims 14, 19, 24 and 29 as being unpatentable over Fukuda et al (U.S. Patent No. 4,985,538) in view of Shibuya et al (U.S. Patent No. 5,270,390) and further in view of Yoshinaka et al (U.S. Patent No. 4,996,291) as set forth in the last Office Action because the evidence set forth therein fails to compare the claimed invention to the closest prior art. The declaration provides data for the shrinkage of the claimed invention and Fukuda et al, and states that the shrinkage of Fukuda et al is outside the shrinkage range of the claimed invention. However, the claimed invention has not been rejected as being unpatentable over Fukuda alone, but over Fukuda in view of Shibuya; it is Shibuya which teaches a heat shrinkable composition comprising a blend of a non – elastomeric polyester and an elastomeric polyester, as discussed on page 2 of the previous Action, and no data have been obtained for Shibuya

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc Patterson, whose telephone number is (703) 305-3537. The examiner can normally be reached on Monday through Friday from 8:30 AM to 5:00 PM. If attempts to reach the examiner by phone are unsuccessful, the examiner's supervisor, Harold

Art Unit: 1772

Pyon, can be reached at (703) 308-4251. FAX communications should be sent to (703) 872-9310. FAXs received after 4 P.M. will not be processed until the following business day.
